

# Accumulator stand

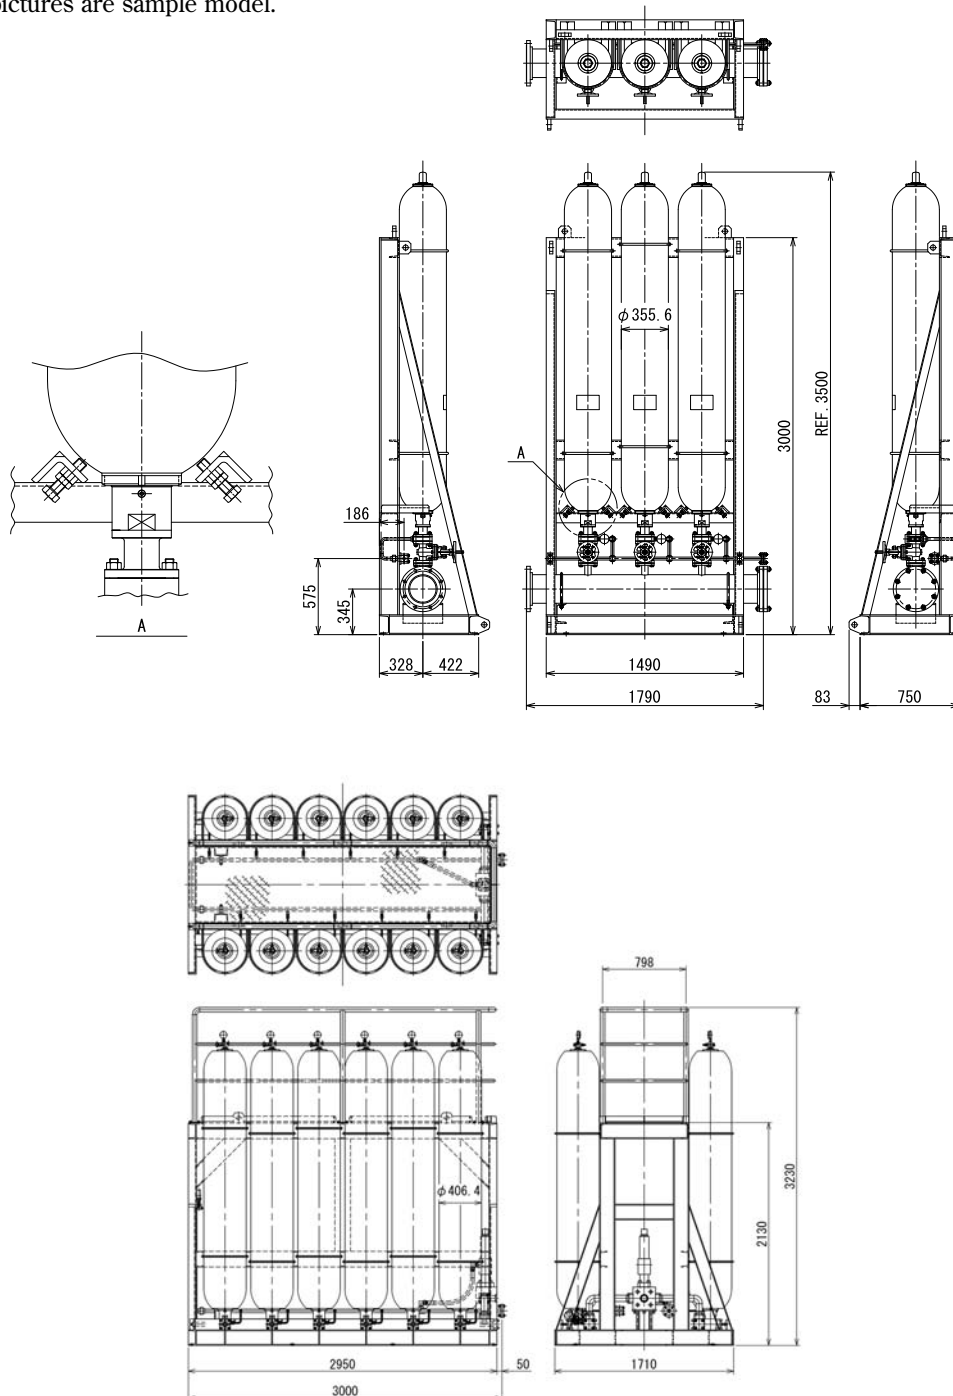

We design and manufacture accumulator stands that several accumulators are put together on in addition to supplying a single accumulator.

Accumulator stands equipped with not only accumulators and the piping but also stop valves, pressure gauges, pressure switches, other hydraulic devices and stainless steel pipes can be provided.

For example, the accumulator stand with deck stand is designed to check the gas pressure or to maintain the accumulator safely and the accumulator stand with adjusting bolts is designed to replace bladder and maintain the accumulator assembly without using hanging tools or machines such as cranes.

The accumulator stand is completely made-to-order, so it is possible to design it in single line, double lines or etc. as customer demand in consideration of customer's installation space.

● Following pictures are sample model.

Accumulator stand photos supplied in past

Accumulator stand with 12 sets of 220L accumulator (31MPa)

Accumulator stand with 10 sets of 230L accumulator (17MPa)

Accumulator stand with 4 sets of 120L accumulator (1MPa)

Gas cylinder stand with 8 sets of pressure vessel for N<sub>2</sub> gas (20MPa)
